***Full Stack Developer** with 5+ years of experience building web, mobile, and backend applications using **React, React Native/Expo, Node.js, and SQL/NoSQL databases**. Develops **LLM-powered applications and AI agents** with tool calling and human-in-the-loop approval workflows. Experienced in **CI/CD**, automated testing, and API integration. Certified in **infrastructure as code (Terraform)**, **workflow automation (GitHub Actions)**, and **Kubernetes application development (CKAD)**. Holds an **MSc in Computer Science from UiT** and is based in Norway.*

Certifications

Certified: Terraform Associate — **Valid until**
Validates infrastructure as code (IaC) skills — *Aug 13, 2028*

Certified: GitHub Actions — **Valid until**
Validates workflow automation and CI/CD pipeline management skills — *Aug 28, 2028*

Certified: Kubernetes Application Developer (CKAD) — **Valid until**
Validates skills in designing, building, and deploying cloud-native applications — *Sept 25, 2028*

Experience

Literate AS — **Tromsø, Norway**
Full Stack Developer (Contract) — *May – July 2026*

- **Frontend Development (React):** Contributed to the Dysmate dyslexia testing platform, developing and maintaining **React** dashboard features for test administration, result visualization, and user workflows.
- **Testing & Quality Assurance:** Wrote unit tests in **Jest** and end-to-end tests in **Playwright**, and used **WebdriverIO (WDIO)** and **Appium** to test workflows on mobile and tablet devices.
- **Full-Stack Contributions:** Contributed to **Node.js/Express** backend services, API enhancements, and integrations, using **Knex.js** for **MySQL** database queries.
- **Simulation & Code Quality:** Ran simulations using the platform's existing scoring logic and lookup tables, and refactored code.
- **Caching & Localization:** Contributed to caching automation and localization across codebases for **Norway, Sweden, and Germany**.
- **Observability & Error Tracking:** Implemented centralized logging and error tracking using **Sentry** to support monitoring and debugging.
- *Technologies:* React, Node.js, Express, Knex.js, MySQL, REST APIs, Jest, Playwright, WebdriverIO (WDIO), Appium, Sentry.

Aido AS — **Tromsø, Norway (Hybrid)**
Full Stack Developer — *July 2021 – April 2026*

- **Career Progression:** Joined part-time in July 2021 and transitioned to full-time employment in April 2023.
- **Mobile Leadership & Migration:** Led end-to-end development of the core mobile app and migrated it from **React Native CLI** to **Expo**.
- **DevOps & EAS Integration:** Migrated the automated **CI/CD** pipeline from **Bitrise/Bitbucket** to **Expo Application Services (EAS)** for App Store and Google Play deployments.
- **Testing:** Wrote unit tests in **Jest** for React components and app logic to help detect regressions.
- **Web UI Contribution:** Assisted with frontend enhancements to the management web application (**Django**), refining UI components with **HTML, CSS, and Bootstrap**.
- *Technologies:* React Native CLI, Expo, EAS, Bitbucket, Sentry, Bitrise, Jest, Django, HTML/CSS, Bootstrap, Amazon.

Linknbit **Remote**

MERN Stack Developer (Contract) *Dec 2020*

- **Full-Stack Engineering:** Built the **Missoq** e-commerce platform using **TypeScript**, with a responsive **React** frontend and a **Node.js/Express** REST API.
- **Payments Integration:** Integrated **Stripe** checkout for card payments and transaction handling.
- **Database design:** Designed a **MongoDB** database schema and used TypeScript interfaces for typed data handling.
- **Cloud Deployment** Configured and managed the production environment on **DigitalOcean**.
- *Technologies:* React, Context, Node.js, Express, TypeScript, MongoDB, Stripe, Sass, DigitalOcean.

Decklaration **Hybrid Pakistan**

MERN Stack Engineer *Jun – Aug 2020*

- **Agency Development:** Developed web applications, backend services, and hybrid mobile apps for a New York-based design agency.
- **Backend & Database Architecture (Medtigo):** Developed backend services in **Node.js/Express**, implemented user data synchronization from **Zoho** using **OAuth 2.0** and Passport.js, and managed **Amazon RDS (SQL)** using **Sequelize**.
- **Mobile Development (Medtigo):** Collaborated on the **Medtigo** mobile app in **React Native**.
- **Frontend Engineering (Mertium):** Contributed to the **Mertium** fintech web platform, building responsive UI components in **React** and **TypeScript**.
- *Technologies:* Node.js, Express, Amazon RDS (SQL), Sequelize, Passport.js, OAuth 2.0, Zoho, React, React Native CLI, Redux, TypeScript, JavaScript, HTML, CSS, Less, Amazon Cloud.

Linknbit **Onsite**

Software Engineer *Jan 2019 – May 2020*

- **React Dashboards:** Built and delivered full-stack admin dashboards in **React**:
  - **(GAS)** — aviation permit and operations platform. **React** frontend with multi-tab permit wizard, role-based access, and invoicing module; **Node.js/Express** REST API backed by **MySQL/Sequelize**, deployed to **Azure** via CI/CD pipeline. Scaffolded the permit checkout flow for **Stripe**.
  - **Sapphire** — modelling platform dashboard with profile/portfolio management; **Node.js/Express** backend with **Stripe** payment integration for bookings.
  - **SmartsAid** — NGO management dashboard backed by **Firebase** for real-time data and authentication.
- **Maps & GIS:** Integrated geospatial and mapping features across web and mobile:
  - **Enterprise Mapping Platform:** Developed interactive maps and geospatial functionality using **Mapbox GL JS** within an operational web platform.
  - **SmartsAid / Kyla** — integrated **Google Maps** and React Native geolocation APIs for proximity-based and location-aware mobile workflows.

- **Mobile Apps:** Built cross-platform mobile applications using **React Native CLI** and **Expo**:
  - **SmartsAid** (NGO) and **Kyla** (Legal) — **Expo** apps with **Node.js** backend, **Firebase** and geolocation integration.
  - **Yogurt App** — consumer mobile app using **React Native CLI** and **NativeBase**.
  - **Dokkani.co** — mobile e-commerce with custom **React Native** bridges to **WordPress/WooCommerce** APIs.
- *Technologies:* React, React Native CLI, Expo, Redux, Context, Node.js, Express, MySQL, Sequelize, MongoDB, DynamoDB, Mapbox GL JS, Google Maps, Geolocation, Stripe, Firebase, Material UI, Bootstrap, NativeBase, Azure, REST APIs.

Education

UiT The Arctic University of Norway — **Tromsø**
Master in Computer Science — *2020–2022*

KPITB — **Pakistan**
Amazon Web services - Solutions Architect(Associate) Course, Online — *2020*

IMSciences Institute of Management & Sciences Pakistan — **Peshawar**
Bachelor in Software Engineering — *2014–2018*

Technical Skills

Specialities: Full-stack web and mobile development

Front-end: React, React Native, Next.js, Redux, Expo, JavaScript, TypeScript, HTML, CSS, Sass, Bootstrap, Material UI, Tailwind

Back-end: Node.js, Express, Mongoose, Sequelize, Python, Django, Firebase, DynamoDB, S3, MongoDB, MySQL, PostgreSQL, serverless functions.

Tools & Platforms: Git, Sanity, OAuth, Heroku, Netlify, DigitalOcean, Amazon cloud, Azure, REST APIs, GraphQL, Bash, Xcode, Android Studio, ChatGPT, Claude, GitHub Copilot, Terraform (IaC), GitHub Actions, Kubernetes.

AI & Agent Development: LLM-powered applications, AI agents, tool calling / function calling, human-in-the-loop workflows, OpenAI API, Claude/Anthropic, Vercel AI SDK, Eve

Projects

Oct 2026: ***AnbudLens — AI Tender Analysis (Personal Project, In Progress)***

Developing a full-stack AI application to extract requirements from Norwegian tender documents, compare amendments, and match supplier evidence with **source citations and human review**. The planned architecture combines **retrieval-augmented generation (RAG)**, **LoRA fine-tuning**, and a **multi-model ensemble** to compare and reconcile requirement extractions. The current implementation includes document parsing, vector retrieval, source-cited answers, review history, and report exports, with **Docker Compose** packaging and **GitHub Actions** checks. *Technologies:* React, TypeScript, Python, FastAPI, LangChain, ChromaDB, multilingual E5 embeddings, Docling, OpenAI, SQLite, pytest, Playwright.

Sep 2026: ***SupportPilot — AI Customer Support Agent*** — GitHub

Built an **LLM-powered AI agent** for e-commerce support using **TypeScript**, **OpenAI**, **Vercel AI SDK**, and **Eve** for agent orchestration. Implemented **tool calling (function calling)** with **Zod schema validation** for customer lookup, order retrieval, and simulated refunds, alongside a

Markdown knowledge base for policy-informed responses. Added **human-in-the-loop approval** for simulated refund execution, with safeguards against duplicate and excessive refunds. Integrated the agent with **Slack API** through signed webhooks and **ngrok**, restricting access through a staff allowlist. Tested Slack conversations end to end, including approval, rejection, and refund safeguards using fictional customer data. *Technologies:* TypeScript, OpenAI, Vercel AI SDK, Eve, AI agents, LLM tool calling, Zod, Slack API, ngrok, Vitest.

Feb 2026: ***AI-Driven Luxury E-Commerce (Passion Project)***

Built a full-stack luxury e-commerce mobile app with **React Native**, **Expo**, **TypeScript**, and **Redux Toolkit**. Integrated **Claude LLM (Anthropic)** through function calling to build an **agentic AI system** for natural language product discovery. Used a headless architecture with **Sanity CMS** for content, **Clerk** for authentication, and **Stripe** for payments, with **Vercel** serverless functions. *Key Achievement:* Built a dynamic GROQ query builder that translates conversations with a large language model **(LLM)** into database queries. Technologies: React Native, Expo, TypeScript, Redux Toolkit, Claude LLM, agentic AI, Sanity CMS, GROQ, Clerk, Stripe, Vercel serverless functions.

2022: ***Nudging based on users' preferences using Fitbit (Master Thesis)***

Developed a full-stack system that delivered personalized activity recommendations, or "digital nudges," based on user preferences and real-time wearable data from the **Fitbit API**. Built backend logic in **Python/Flask** to process the data and generate nudges toward step targets through a mobile interface. Evaluated the system with users and gathered feedback on its ability to encourage physical activity. Technologies: Expo, Firebase, Python, Flask, REST APIs, Fitbit API, React Native Paper.

2021: ***Chord: Scalable Peer-to-Peer Lookup (University Project)***

Implemented the Chord distributed hash table (DHT) algorithm for peer-to-peer lookup in a key-value store prototype. Key Achievement: Designed and tested the distributed system logic using **Node.js** and **Python** on the **UiT Cluster**. Technologies: Node.js, Python, Shell/Bash, distributed systems (Paper: `https://dl.acm.org/doi/10.1145/964723.383071`).

2018: ***Currency Recognition & Conversion (Bachelor Thesis)***

Developed a native mobile app to scan currency notes, identify their denomination, and convert their value to USD. Key Achievement: Used **OpenCV** for computer vision-based currency recognition and integrated a REST API for current exchange rates. Technologies: Android, Java, OpenCV, REST APIs, MATLAB.

Hobbies

- Programming, music, video games, movies, reading, hiking, gym, indoor climbing, football, traveling.

Languages

English, Pashto, Urdu — *Fluent*

Norwegian — *A2, currently studying towards B1*
